DETAILED ACTION

Allowable Subject Matter

1. Claims 1-21 are allowable over the prior art of record.

2. The following is an examiner's statement of reasons for allowance:

As per independent claims 1,9,18, and 21, the specific limitations pertaining to a convolution system that modifies an input vector with a fixed waveform to transform a waveform of the input vector, wherein the modified transformed input vector to a speech codec as an excitation vector in conjunction with a random code vector being decoded by the input vector, a first convolution with the input vector to generate the excitation vector, in addition to a further convolution of the excitation vector with an impulse response of the output synthesized speech filter, is not explicitly taught by the prior art of record. With respect to the prior art of record, 1) Ozawa teaches the convolution of an excitation vector with an impulse response of a synthesis filter, 2) Tzeng teaches producing an excitation vector (which comprises a waveform superimposed upon a plurality of pulses) by adding a noise signal from a codebook generator to a pulse excitation vector, but both references fail to disclose the particular convolution calculations as disclosed in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
